Dear Sirs

Agreement No.: CM 14/2018  
Independent Environmental Checker Services for  
Expansion of Sha Tau Kok Sewage Treatment Works  
Baseline Environmental Monitoring Report (Noise)

We refer to emails of 19, 21, 26 & 31 March and 1 & 2 April 2019 from Fugro Technical Services Limited attaching the Baseline Environmental Monitoring Report (Noise).

We have no further comment and hereby verify the captioned Report in accordance with Clause 3.3 of the Environmental Permit no. EP-517/2017.

Should you have any queries, please do not hesitate to contact the undersigned or our Mr Adi Lee at 2618 2831.

Yours faithfully  
ANEWR CONSULTING LIMITED

## EXECUTIVE SUMMARY

- i. This report presents the baseline monitoring requirements, methodologies and results of baseline measurements in accordance with the requirements, where applicable, in the EM&A Manual.
- ii. The baseline monitoring work was conducted between 25 February 2019 and 11 March 2019.
- iii. The average results and Action and Limit Levels (A/L Levels) of noise baseline monitoring at each monitoring locations are summarized in **Table I**. The Action and Limit Levels for noise impact monitoring were derived based on the criteria adopted from the EM&A Manual.

**Table I Summary of Noise Baseline Monitoring Results and A/L Levels**

Time Period	Monitoring Location No.	Description	Monitoring Results Average (Range) In dB(A)	Action Level	Limit Level
Leq(30min),dB(A) (0700-1900 hrs in normal weekday)	NM1	Block 45, Sha Tau Kok Chuen	65 (53-75)	When one documented complaint is received from any one of the noise sensitive receivers	75 dB(A)*
	NM2	Building along Shun Lung Street	65 (53-74)		

Note:

\*75 dB(A) for residential premises.

## 1. INTRODUCTION

### 1.1 Background

- 1.1.1 The Project in Sha Tau Kok mainly comprises of the following items:
  - i) Increase the treatment capacity of Sha Tau Kok Sewage Treatment Works (STKSTW) to 5,000 m<sup>3</sup>/day at Average Dry Weather Flow (ADWF) in Phase 1, with suitable allowance to cater for a further increase of treatment capacity to 10,000 m<sup>3</sup>/day at ADWF in Phase 2;
  - ii) Construct a Temporary Sewage Treatment Plant (TSTP);
  - iii) Demolish the existing Sha Tau Kok Sewage Pumping Station (STKSPS) and decommission the rising main between STKSPS and STKSTW;
  - iv) Construct a new gravity sewer; and
  - v) Decommission the existing submarine outfall and construct a new one.
- 1.1.2 The Project site will be within the existing STKSTW while the construction of the gravity sewers and demolition of STKSPS will be carried out in Sha Tau Kok Town. The proposed submarine outfall will be constructed by Horizontal Directional Drilling (HDD) method under the sea bed of Starling Inlet.
- 1.1.3 Fugro Technical Services Limited (FTS) has been appointed to work as the Baseline Phase Environmental Team (ET) for Drainage Services Department to implement the Environmental Monitoring and Audit (EM&A) programme for the Environmental Permit No. EP-517/2017 - Expansion of Sha Tau Kok Sewage Treatment Works.
- 1.1.4 The EM&A programme of this project shall be implemented in accordance with the requirements and procedures set out in the EM&A Manual (AEIAR-207/2017) and the Environmental Permit No. EP-517/2017.

### 1.2 Purpose of Baseline Monitoring Report

- 1.2.1 This report presents the baseline monitoring requirements, methodologies and results of baseline measurements in accordance with the requirements, where applicable, in the EM&A Manual.
- 1.2.2 The baseline monitoring work was conducted between 25 February 2019 and 11 March 2019.

## 2. NOISE

### 2.1 Monitoring Methodology & Criteria

- 2.1.1 The ET should carry out the baseline noise monitoring prior to the commencement of the major construction works. The baseline noise levels should be measured for a continuous period of at least 14 consecutive days at a minimum logging interval of 30 minutes during daytime between 0700 and 1900 hours. The Leq, L10 and L90 should be recorded at the specified intervals. A schedule for the baseline monitoring should be submitted to the IEC for approval before the commencement of baseline monitoring.
- 2.1.2 Table 2.1 presents the baseline noise monitoring parameters and frequencies.

**Table 2.1 Baseline Monitoring Parameters and Frequencies of Noise Monitoring**

Parameter	Frequency and Period
LAeq (30 min) in normal weekdays and LAeq (5 min) other than normal weekdays <i>(L10 and L90 will be recorded for reference)</i>	0700-1900 for at least 14 consecutive days

- 2.1.3 There should not be any construction activities in the vicinity of the monitoring stations during the baseline monitoring. Any non-project related construction activities in the vicinity of the monitoring stations during the baseline monitoring should be noted and the source and location of such activities should be recorded.
- 2.1.4 In exceptional cases, when baseline monitoring data obtained are insufficient or questionable, the ET should liaise with the IEC and EPD to agree on an appropriate set of data to be used as the baseline reference.
- 2.1.5 The monitoring and the QA/QC procedures are as follows:
- The monitoring station will set at a point 1m from the exterior of the sensitive receivers building façade and set at a position 1.2m above the ground.
  - The battery condition was checked to ensure good functioning of the meter.
  - Parameters such as frequency weighting, the time weighting and the measurement time will set as follows:
    - frequency weighting : A
    - time weighting : Fast
    - measurement time : continue 5 minutes interval
  - Prior to and after noise measurement, the meter shall be calibrated using the calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement is more than 1.0 dB, the measurement will be considered invalid and repeat of noise measurement is required after re-calibration or repair of the equipment.
  - The wind speed at the monitoring station shall be checked with the portable wind meter. Noise monitoring should be cancelled in the presence of fog, rain, and wind with a steady speed exceeding 5 m/s, or wind with gusts exceeding 10 m/s.
  - Noise measurement should be paused during periods of high intrusive noise if possible and observation shall be recorded when intrusive noise is not avoided.
  - At the end of the monitoring period, the Leq, L10 and L90 shall be recorded. In addition, site conditions and noise sources should be recorded on a standard record sheet.

## Maintenance / Calibration

- The microphone head of the sound level meter and calibrator should be cleaned with a soft cloth at quarterly intervals.
- The sound level meter and calibrator should be calibrated annually by a HOKLAS laboratory or the manufacturer.
- Relevant calibration certificates are provided in **Appendix C**.

## 2.2 Monitoring Equipment

- 2.2.1 As referred to in the Technical Memorandum (TM) issued under the NCO, sound level meters in compliance with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications shall be used for carrying out the noise monitoring. Immediately prior to and following each noise measurement the accuracy of the sound level meter shall be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements should be accepted as valid only if the calibration level from before and after the noise measurement agrees to within 1.0 dB.
- 2.2.2 Noise measurements should not be made in fog, rain, wind with a steady speed exceeding 5 m/s or wind with gusts exceeding 10 m/s. The wind speed shall be checked with a portable wind speed meter capable of measuring the wind speed in m/s.
- 2.2.3 The ET is responsible for the provision of the monitoring equipment to ensure that sufficient noise measuring equipment and associated instrumentation are available for carrying out the baseline monitoring, regular impact monitoring and ad hoc monitoring. All the equipment and associated instrumentation shall be clearly labelled.
- 2.2.4 **Table 2.2** summarizes the noise monitoring equipment model used for this project.

**Table 2.2      Noise Monitoring Equipment**

Manufacturer/ Brand	Model	Equipment	Serial Number
Casella	CEL-63X Series	Sound Level Meter	1488289
	CEL-63X Series	Sound Level Meter	1488291
	CEL-120/1	Sound Calibrator	2383852
	CEL-120/1	Sound Calibrator	2383886

## 2.3 Monitoring Locations

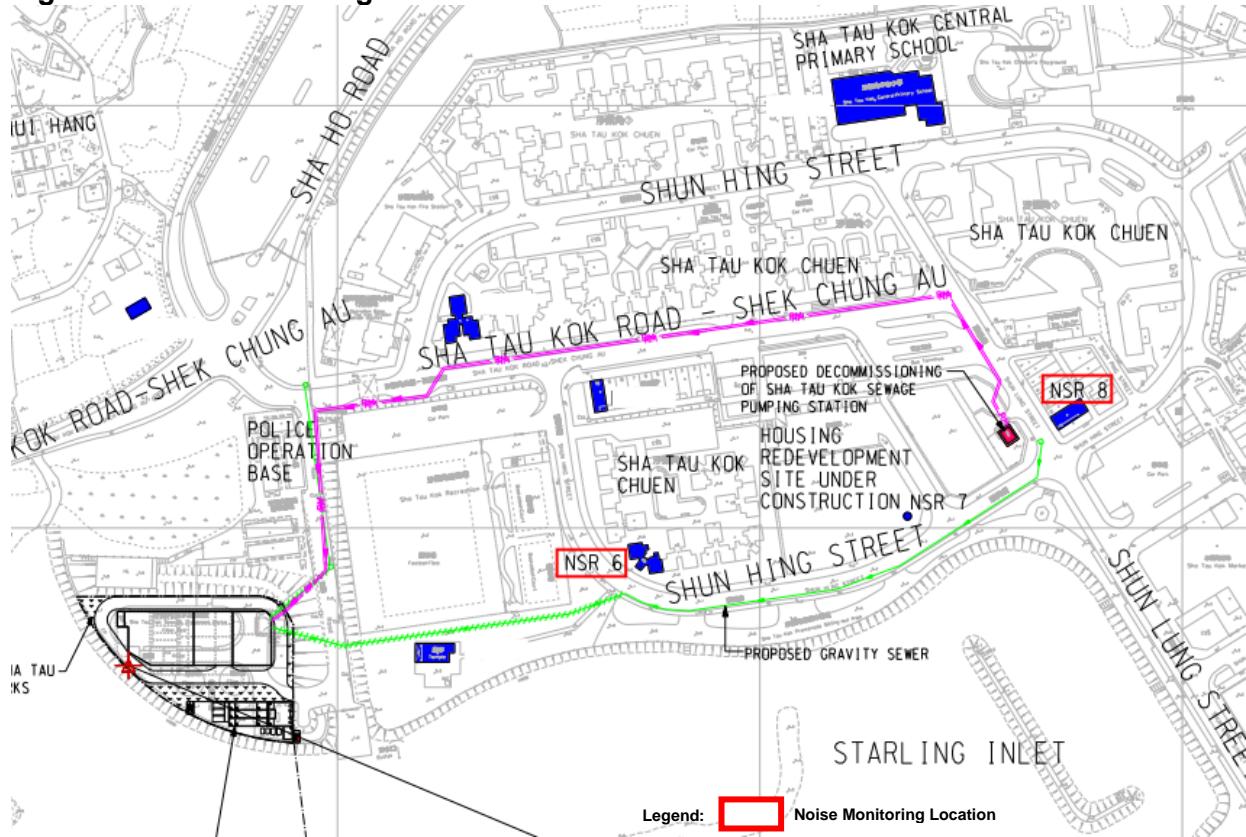

- 2.3.1 The Monitoring Stations are summarized in **Table 2.3** and shown in **Figure 1**.

**Table 2.3 Representative Noise Sensitive Receivers (NSRs) identified for Construction Noise Monitoring**

ID	Noise Sensitive Receivers (NSR)	Description	Type of Measurement*
NM1	NSR 6	Block 45, Sha Tau Kok Chuen	Free-field
NM2	NSR 8	Building along Shun Lung Street	Free-field

Note: \*For Free-field measurement, +3dB(A) should be added to the measured results

## 2.4 Results and Observations

- 2.4.1 The baseline monitoring work was conducted between 25 February 2019 and 11 March 2019.
- 2.4.2 The monitoring data are summarized in **Table 2.4**. Detailed noise monitoring data are presented in **Appendix D**.

**Table 2.4 Summary of Noise Baseline Monitoring Results**

Time Period	Leq (30min) / Leq (5min) Average (Range)	
	Noise Monitoring Location	
	NM1	NM2
0700-1900 in normal weekdays (25 February to 2 March, 4 to 9 & 11 March)	65 (53-75)	65 (53-74)
0700-1900 other than normal weekday (3 & 10 March)	63 (53-69)	67 (54-79)

Remarks:

- Leq 30min (L10 and L90 will be recorded for reference) monitoring shall be conducted during 0700 and 1900 at 14 consecutive days on normal weekdays.
- Leq 5min (L10 and L90 will be recorded for reference) monitoring shall be conducted during 0700-1900 other than normal weekdays.
- Correction of +3dB(A) for Free-field Measurement.

- 2.4.3 Base on the site observation during the monitoring period, extreme noisy event observed are heavy truck and loading and unloading of cargo near NM2. In order to provide a more representative baseline noise data of NM2, the extreme noise results are excluded.

## 2.5 Determination of Action and Limit Levels for Noise Monitoring

- 2.5.1 **Table 3.5** presents the Action and Limit Levels for construction noise.

**Table 3.5 Action and Limit Levels for Construction Noise**

Time Period	Monitoring Location No.	Description	Action Level	Limit Level
Leq <sub>(30min)</sub> , dB(A) (0700-1900 hrs in normal weekday)	NM1	Block 45, Sha Tau Kok Chuen	When one documented complaint is received from any one of the noise sensitive receivers	75 dB(A)*
	NM2	Building along Shun Lung Street		

Noted:

\*75 dB(A) for residential premises.

## 2.6 Influencing Factors

### 2.6.1 Major Activities during Monitoring

No construction activity during baseline monitoring.

### 2.6.2 Weather Conditions

The prevailing weather conditions, wind speed and wind direction are provided in **Appendix B**.

### 2.6.3 Other Factors which Might Affect the Results

Base on the site observation during the monitoring period, extreme noisy event observed are heavy truck and loading and unloading of cargo near NM2. In order to provide a more representative baseline noise data of NM2, the extreme noise results are excluded.

## 3. REVISIONS FOR INCLUSION IN THE EM&A MANUAL

- 3.1.1 The baseline environmental monitoring was conducted according to the EM&A Manual requirement and the monitoring methodology and parameters monitored are all in line with the EM&A Manual.

## 4. COMMENTS AND CONCLUSIONS

- 4.1.1 The baseline monitoring work was conducted between 25 February 2019 and 11 March 2019.
- 4.1.2 The baseline monitoring was carried out in accordance with the EM&A Manual, in respect of the methodology, equipment, location and monitoring parameters.
- 4.1.3 The Action and Limit Levels were derived based on the baseline monitoring results, impact monitoring will be conducted in the construction phase based on the established Action and Limit Levels.

## **Appendix B**

### **Monitoring Equipment Calibration Certificates**

## Certificate of Conformity and Calibration

**Instrument Model:-**

CEL-633A

Serial Number 1488289  
Firmware revision V006-03

**Microphone Type:-** CEL-251      **Preamplifier Type:-** CEL-495  
Serial Number 2706      Serial Number 003917

**Instrument Class/Type:-**

1

**Applicable standards:-**

IEC 61672: 2002 / EN 60651 (Electroacoustics - Sound Level Meters)  
IEC 60651 1979 (Sound Level Meters), ANSI S1.4: 1983 (Specifications For Sound Level Meters)

**Note:-** The test sequences performed in this report are in accordance with the current Sound level meter Standard - IEC61672. The combination of tests performed are considered to confirm the products electro-acoustic performance to all applicable standards including superceded Sound Level Meter Standards - IEC60651 and IEC60804.

**Test Conditions:-**

31 °C  
51 %RH  
1000 mBar

**Test Engineer:-**  
**Date of Issue:-**

Chris Taylor  
September 10, 2018

**Declaration of conformity:-**

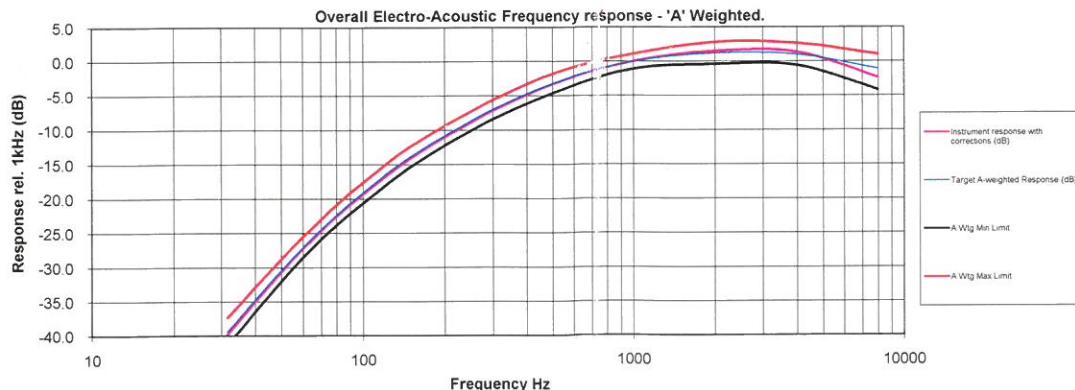

This test certificate confirms that the instrument specified above has been successfully tested to comply with the manufacturer's published specifications. Tests are performed using equipment traceable to national standards in accordance with Casella's ISO 9001:2008 quality procedures. This product is certified as being compliant to the requirements of the CE Directive.

**Test Summary:-**

Self Generated Noise Test	All Tests Pass
Electrical Signal Test Of Frequency Weightings	All Tests Pass
Frequency & Time Weightings At 1 kHz	All Tests Pass
Level Linearity On The Reference Level Range	All Tests Pass
Toneburst Response Test	All Tests Pass
C-peak Sound Levels	All Tests Pass
Overload Indication	All Tests Pass
Acoustic Tests	All Tests Pass

**Combined Electro-Acoustic Frequency Response - A Weighted****Combined Electro-Acoustic Frequency Response - A Weighted (IEC 61672-3:2006)**

The following A-Weighted frequency response graph shows this instrument's overall frequency response based upon the application of multi-frequency pressure field calibrations. The microphones Pressure to Free field correction coefficients are applied to pressure response. Reference level taken at 1kHz.

Certificate of  
Conformance and Calibration for

**CEL-120 Acoustic Calibrator**

Applicable Standards :- IEC 60942: 2003 & ANSI S1.40: 2006

CEL-120/1 Class 1

CEL-120/2 Class 2

Serial No: 2383852

Firmware: 04

Temperature: 19 °C Pressure: 1013 mb %RH 47

Frequency = 1.00kHz ± 2Hz T.H.D. = < 1%	Calibration Level
SPL @ 114.0dB Setting	<u>114.01</u> dB
SPL @ 94.0dB Setting (CEL-120/1 only)	<u>93.96</u> dB/N.A

Engineer: NAT Date: 17 OCT 2018

Company test equipment and acoustic working standards, used for conformance testing, are subject to periodic calibration, traceable to UK national standards, in accordance with the company's ISO9001 Quality System.

**DECLARATION OF CONFORMITY**

This certificate confirms that the instrument specified above has been produced and tested to comply with the manufacturer's published specifications and the relevant European Community CE directives.
